RE: Valley North Transmission Line Project

Dear Neighbor,

We invite you to attend an open house for the proposed Valley North Transmission Line Project (Valley North Project) where you can engage one-on-one with subject matter experts to learn and ask questions about the project.

You are receiving this letter because your property is located near a potential study segment being considered for the Valley North Project. Study segments represent possible corridors under consideration for the project. No route has been selected. Detailed mapping will be available on our website prior to the open houses.

The Valley North Project Team will be hosting an open house in your area. Members of the project team will be available to share information, answer questions and gather your feedback. The open house will feature information stations where you can learn about the project and speak to team members one-on-one at your own pace. There is no formal presentation, so you're welcome to stop by whenever it's convenient.

We encourage you to attend an open house in your area any time between 4 and 7:30 p.m. Doors will open at 4 p.m. All open houses are listed on the handout enclosed and on our website: vltransmission.com/valley-north.

More About the Project

The Valley North Project was developed by Valley Link Transmission – a joint venture between Dominion Energy, FirstEnergy Transmission and Transource Energy (jointly owned by American Electric Power and Evergy). PJM Interconnection LLC, the federally regulated regional transmission operator, selected this project as a forward-looking solution to strengthen the region's electric transmission backbone, support long term reliability and help drive economic growth for decades to come. The Valley North Project will build approximately 260 miles of new 765-kV electric transmission line between Putnam County, West Virginia and Frederick County, Maryland. The project also includes two new substations in Hardy County, West Virginia and Frederick County, Maryland.

The Valley North Project is still in its early stages, and we're committed to keeping the process open and collaborative. Right now, we're reviewing potential study segments by looking at environmental, cultural and land use information, along with feedback from landowners and the community.

Your input plays an important role. It helps us understand what matters most to your community, learn about any potential impacts to your property and find ways to reduce those impacts as we move forward.

Can't Make an Open House?

Please visit our website where we will provide the same information shared at the open houses. On the website, you can learn more about the Valley North Project, view project maps as they become available and share your feedback.

We want to hear from community members and encourage you to share your thoughts. There are multiple ways to submit comments, including through the project website, by email or via the project hotline.

Stay Involved

Project updates and opportunities for public input will be shared through direct mail and on our website as they become available. In the event of inclement weather, meeting updates or postponements will be posted at www.vltransmission.com/valley-north or available by calling (304) 207-0120.

Thank you for taking the time to review this information. We value your input and look forward to seeing you at one of our upcoming open houses.

Sincerely,

Valley Link Transmission

A major step toward continued grid reliability and regional growth.

Valley North Project

A 765-kV Valley Link Transmission Project

Meeting Historic Demand and Delivering Reliable Power

PJM Interconnection LLC (PJM), the regional grid operator that manages the flow of wholesale electricity across 13 states, including Maryland, Virginia, and West Virginia, estimates that the area must double transmission capacity by 2035, necessitating the construction of a new 765-kilovolt (kV) transmission line to deliver reliable and efficient energy.

After considering several solutions, PJM selected Valley Link Transmission Company LLC (Valley Link), an innovative collaboration between Dominion Energy, FirstEnergy Transmission LLC and Transource Energy LLC (a partnership between American Electric Power and Evergy), to develop the Valley North Project.

The Valley North Project involves constructing a new 765-kV transmission line capable of efficiently delivering large amounts of power over long distances. A single 765-kV line can deliver enough electricity to power 2 million homes.

The Valley North Project increases the electric grid's capacity to deliver electricity across the region, reducing the risk of outages and improving reliability.

Project Overview

- Building 2 substations, one in Hardy County, West Virginia, and one in Frederick County, Maryland
- Upgrading a substation in Putnam County, West Virginia
- Building approximately 260 miles of new 765-kV transmission line between Putnam County, West Virginia and Frederick County, Maryland, including approximately:
 - 225 miles in West Virginia*
 - 30 miles in Virginia*
 - 5 miles in Maryland*

**Mileage is estimated. Final mileage to be determined after selecting a preferred route.*

Key Benefits:

Enhances electric service reliability for customers

Drives regional economic growth

Creates hundreds of local construction jobs

Project Timeline

- Early Stakeholder Engagement**
Winter/Spring 2026
 - Meetings with local officials, state and federal agencies to understand community needs and inform development of study segments
- Open Houses and Community Input**
Summer 2026
 - Public open houses to share information about the project, study segments, and gather feedback from the community
- Feedback and Study Segment Review**
Late Summer/Early Fall 2026
 - Evaluate study segments based on the feedback received to develop potential route alternatives
- Open Houses and Community Input**
Late 2026
 - Public open houses to share updated information about the project, potential route alternatives, and gather feedback from the community
- Proposed and Alternate Route Identification**
Early/Mid 2027
 - Share proposed and alternate routes with the public and file regulatory applications in West Virginia, Virginia and Maryland
- Permitting, Environmental Studies, Easement Acquisition and Construction**
After Regulatory Filings
